MCA graduate (2026) with about a year of internship experience across data analytics, SQL, AI/ML, and full stack development with Django. Comfortable moving between cleaning up messy datasets, writing SQL for reporting, training ML models, and building out REST APIs — picked up most of this hands-on rather than in a classroom. Also completed the Deloitte Australia Data Analytics Job Simulation recently. Built a few personal projects on the side to keep learning outside of internship work.

CORE SKILLS

- SQL: writing and optimizing queries, joins, subqueries, aggregations for reporting; MySQL schema design
- AI/ML: Scikit-learn, TensorFlow, PyTorch, regression and classification models, CNNs, feature engineering, deploying models via REST APIs
- Data Analysis: EDA, data cleaning, statistical analysis, hypothesis testing
- Programming: Python (Pandas, NumPy, Scikit-learn), SQL, JavaScript
- Backend: Django, Django REST Framework, Flask, REST API design & development, MySQL, database design
- Frontend: HTML5, CSS3, JavaScript, Tailwind CSS
- Visualization & BI: Power BI, Tableau, Excel, Matplotlib, Seaborn, Chart.js
- Tools: Git/GitHub, Jupyter, Postman, Scrapy

SOFT SKILLS

- Comfortable owning a project from scratch — most of my personal projects were built solo, start to finish, without anyone assigning tasks along the way.
- Used to working with a team during internships — syncing on requirements, then turning around analysis or dashboards that others actually relied on.
- Can explain technical results to people who aren't technical — this came up a lot when case study findings needed to become business recommendations.
- Picked up data analysis, ML, and full stack dev in the same year, so I'm used to switching context between different types of work.

INTERNSHIP EXPERIENCE

Python Data Analytics Intern

Feb 2026 – Aug 2026

Qspiders

- Worked with 15+ datasets that needed cleaning before they were usable — missing values, inconsistent formatting, duplicates, the usual. Wrote SQL queries (joins, subqueries) for extracting and reporting data, and built weekly dashboards in Matplotlib/Seaborn that replaced what used to be a manual spreadsheet process. Also ran through 5 case studies applying statistical tests to back up business recommendations.

Machine Learning Developer Intern

Jan 2026 – Feb 2026

iHub Robotics

- Trained a few regression and classification models using Scikit-learn and TensorFlow on a dataset of about 11,500 rows, after cleaning and feature engineering — best model landed around 83% accuracy. Took it a step further and deployed the model behind a Django REST endpoint so it could actually serve live predictions instead of just sitting in a notebook.

Python Full Stack Developer Intern

Oct 2023 – Dec 2023

Inmakes

- Built REST API endpoints with Django REST Framework for a data-driven web app running on MySQL, including writing the SQL and schema for the data layer. Also handled connecting the frontend to those APIs (HTML, CSS, JS) for a fairly standard CRUD app — tried to keep the code clean enough that someone else could pick it up later.

PROJECTS

FinTrack — Personal Finance Tracker

- Built this on my own to track income/expenses, budgets, and savings goals. Split it into separate Django apps (auth, transactions, budgets, reports) so it wouldn't turn into a mess as I added features. Has real-time overspend alerts against monthly/category limits, a Chart.js dashboard for spending trends, and CSV/PDF export for reports.

Stack: Python, Django, SQLite, Tailwind CSS, Chart.js, ReportLab

Logistics Demand Forecasting

- Trained a forecasting model on about 2 years of historical logistics data — got the error rate (MAPE) down to around 13% after tuning features. Wrapped it with a Django backend that serves predictions through REST endpoints, with a basic dashboard to view results by route.

Stack: Python, Django, Pandas, Scikit-learn, SQL, JavaScript

Vegetable Quality Inspection (CNN)

- Built a CNN from scratch to classify vegetable quality into 8 categories using a labeled image dataset — got it to around 90% accuracy in testing. Connected it to a Django backend so the predictions feed into a dashboard showing quality scores and freshness trends.

Stack: Python, Django, TensorFlow, Pandas, SQL, HTML/CSS/JS

CERTIFICATIONS

- Deloitte Australia — Data Analytics Job Simulation, via Forage, July 2026 (Credential ID: RpWrnpHopjyQC49B)

EDUCATION

Master of Computer Applications (MCA)

Oct 2024 – Apr 2026

MES Advanced Institute of Science & Technology

Bachelor of Computer Applications (BCA)

Jun 2019 – Apr 2022

SCMS School of Technology & Management

LANGUAGES & INTERESTS

Languages: Malayalam, English, Tamil. Interests: Data visualization, web development, video games, music, motorcycle riding.
