MCA graduate (2026) who has spent the past year moving between data analysis and Django development across three internships — cleaning and analyzing production-scale datasets, building BI dashboards, and shipping REST APIs. Most recently completed the Deloitte Australia Data Analytics Job Simulation. Looking for a Data Analyst or Full Stack Developer role, ideally one where both sides of that skill set are useful.

CORE SKILLS

- Data Analysis: EDA, data cleaning, statistical analysis, hypothesis testing
- Programming: Python (Pandas, NumPy, Scikit-learn), SQL, JavaScript
- Backend: Django, Django REST Framework, MySQL, database design
- Frontend: HTML5, CSS3, JavaScript, Tailwind CSS
- Visualization & BI: Power BI, Tableau, Excel, Matplotlib, Seaborn, Chart.js
- Tools: Git/GitHub, Jupyter, Postman

INTERNSHIP EXPERIENCE

Python Data Analytics Intern

Feb 2026 – Aug 2026

Qspiders

- Ran EDA on 15+ real-world datasets using Pandas and NumPy.
- Mainly cleaning up inconsistent formatting, missing values, and duplicate records before analysis.
- Built dashboards in Matplotlib/Seaborn for weekly reporting, replacing manual spreadsheet summaries the team had been doing by hand.
- Wrote SQL queries for data extraction and reporting, and worked through 5 case studies applying statistical tests to support business recommendations.

Machine Learning Developer Intern

Jan 2026 – Feb 2026

iHub Robotics

- Trained regression and classification models in Scikit-learn and TensorFlow on prediction tasks.
- Best model reached ~83.56% accuracy.
- Cleaned and feature-engineered an 11,564-row dataset.
- Wrapped a trained model in a Django REST endpoint so it could do live predictions instead of running only in a notebook.

Python Full Stack Developer Intern

Oct 2023 – Dec 2023

Inmakes

- Built and consumed REST API endpoints in Django REST Framework for a data-driven web app.
- Handled the frontend-backend wiring — HTML/CSS/JS calling the Django APIs — for a fairly standard CRUD-heavy application.

PROJECTS

FinTrack — Personal Finance Tracker

- Django app for income/expense tracking, category budgets, and savings goals, split into separate apps (auth, transactions, budgets, reports) to keep it maintainable as it grew.
- Budget models flag overspend against monthly and per-category limits with real-time percentage tracking.
- Dashboard uses Chart.js (category breakdown, 6-month income vs. expense trend) fed by aggregated Django ORM queries; reports export to CSV/PDF via ReportLab.

Stack: Python, Django, SQLite, Tailwind CSS, Chart.js, ReportLab

Logistics Demand Forecasting

- Forecasting model trained on ~2 years of historical logistics data; got MAPE down to roughly 12.86% after feature tuning.
- Django backend serves the forecasts through REST endpoints, with a dashboard for viewing results across routes.

Stack: Python, Django, Pandas, Scikit-learn, SQL, JavaScript

Vegetable Quality Inspection (CNN)

- Custom CNN classifying vegetable quality across 8 categories on a labeled image set — 89.85% accuracy in testing.
- Django backend and REST endpoints connect the model to a dashboard summarizing quality scores and freshness trends.

Stack: Python, Django, TensorFlow, Pandas, SQL, HTML/CSS/JS

CERTIFICATIONS

- Deloitte Australia — Data Analytics Job Simulation, via Forage, July 2026 (Credential ID: RpWrnpHopjyQC49B)

EDUCATION

Master of Computer Applications (MCA)

Oct 2024 – Apr 2026

MES Advanced Institute of Science & Technology

Bachelor of Computer Applications (BCA)

Jun 2019 – Apr 2022

SCMS School of Technology & Management

LANGUAGES & INTERESTS

Languages: Malayalam, English, Tamil. Interests: Data visualization, web development, video games, music, motorcycle riding.
